Introduction

AppJetty offers a mobility solution to your users in the form of MageMob App Builder and helps them to access your store and place orders through their mobile on the go.

You must have an extension for store owners, which allows their customers to place orders from their mobile. It is easy to download and quite user-friendly for your customers. Your customers can view your store and entire features on their mobile and place orders anytime from anywhere the search.

Benefits of MageMob App Builder

- Allows your customers to carry your store with them anywhere.
- Extremely user-friendly, simple to manage by the merchants and easy to navigate by the end users.
- Increases customer outreach due to mobility and uniqueness of smart phones.
- Increases the overall bottom line of the business, benefiting the store owners.
- More satisfied customers due to store accessibility from iPhone and Android smart phones.
- Improves customer satisfaction and enhances online visibility of your business.
- The application now supports multiple currency formats based on the selected store.

Installation & Activation

Installation Steps

Manual Installation (Installing Magento 2 extension by copying code)

Step 1:

For Windows OS:

- Go to <your Magento install dir>/app/code. Under that, create the folders using following hierarchy:
 - Biztech
 - Magemobcart

For Linux OS:

- Enter the following commands keeping their order:
 - cd <your Magento install dir>/app/code
 - mkdir -p Biztech/ Magemobcart
 - After this, find the Download Zip and extract all files and folders in Biztech/ Magemobcart

Step 2:

- After the successful installation, you have to run the command on Magento2 root directory- “php bin/magento setup: upgrade” and “php bin/magento setup:di:compile”
- If you see blank page or permission error, go to Terminal (Linux)/ Command Prompt (Windows) and run the following command:
 - cd [magento root directory] [var]
 - run the following command
 - \$ chmod -R 777 *

Step 3:

- After running the command, log into the admin panel and clear the Cache.
- Go to **SYSTEM -> Tools (section) -> CACHE MANAGEMENT** to clear the cache.

Step 4:

- After successful installation, you can see the 'MageMob App Builder' under 'APPJETTY' tab inside **STORES** -> **Configuration**.

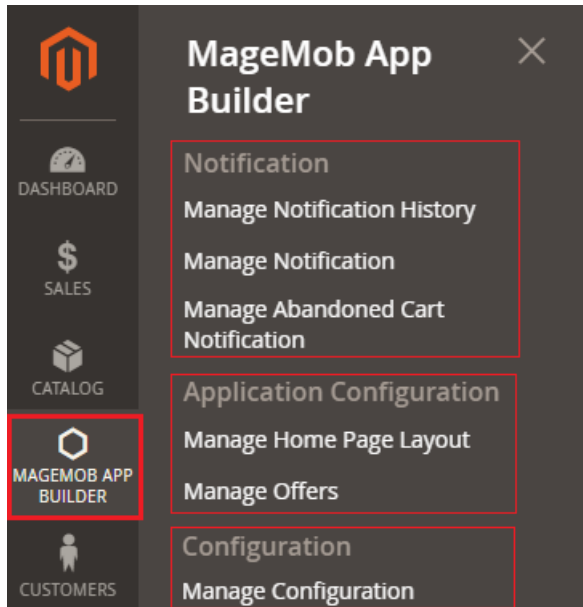

- You can also see **MageMob App Builder** in the drawer menu.

Magento Backend Configuration

- You can configure for the mobile app from the Backend configuration.

Extension Activation & Other Configuration

By clicking on **Manage Configuration**, you can activate the extension, set general configuration, and insert Notification key for Android/iOS users.

Copy an activation key

- Copy the activation key from the Order Confirmation Mail. **OR**
- Log into your account at www.appjetty.com using the email and password you have provided at checkout process.
- Go to Downloadable Options and copy the activation key for the App Builder extension.

Activate the extension

- Log into Magento Admin Panel. Navigate to the **MAGEMOB APP BUILDER** → **Manage Configuration** to configure the MageMob App Builder app settings.
- You can also reach out to the MageMob App Builder configuration by navigating **STORES** -> **CONFIGURATION** -> **APPIJETTY** -> **MageMob App Builder**.
- You need to insert the activation key in the “Activation Key” for the App Builder extension and then click on the **Save Config** button.

Abandoned Cart * 😊

Notification Title **Note** : Add dynamic value for category and product using {{category_name}} -> {{product_name}} syntax within 35 characters.

Abandoned Cart * 😊

Notification Title For Multiple Items **Note** : Add dynamic value for category and product using {{category_name}} -> {{product_name}} syntax within 35 characters. **{{category_name}} works only in magento 2.4 and above**

Notification Message * 😊

Note : Add dynamic value for multiple products using syntax {{customer_name}} (For Example: Hello {{customer_name}}!)

Choose File checkbox-icon-png-59.png

Note : Allowed file types are jpg, jpeg & png.

Status * ▼

Time Interval (Hours) *

Note : Please add value to check customer cart hours to send notification. For eg- 10.

How you send notification ? * ▼

Note : Please select value to send notification by once or repetitive.

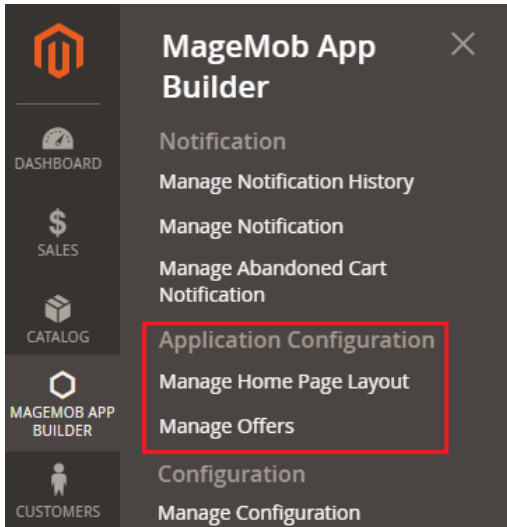

- **Choose File:** To add an image for notification, click on the 'Choose File' button and select the image which you want to upload.
- **Status:** Select the status whether to be **Enabled** or **Disabled**.
- **Time Interval (Hours):** Set the time interval to send the abandoned cart notification. For example, if you have inserted a time interval of 4 hours, the abandoned cart notification will be sent to the customer whose cart is abandoned and still pending checkout for more than 4 hours.
- **How you send notification?:** If you want to send the notification repetitively until the abandoned cart is cleared, you must select either **Once** for sending the notification or **Repeat** for sending the notification repetitively.
- After configuring the abandoned cart, you need to click on the **Save** button to save the notification for the abandoned cart. You will see the newly added abandoned cart notification in the list.
- You can change the status of the notification and delete any unwanted notification from the list.

Application Configuration

- You can customize the page layouts to display in the Mobile App (Store View) to the end-users.

Manage Home Page Layout

- Admin can showcase the products on the App's dashboard by configuring various blocks from Magento Backend.

Go to MageMob App Builder -> Manage Home Page Layout.
You can manage and Add a new Layout.

- By clicking on 'Manage Home Page Layout', you will see already added layouts in the list view. You will see the details like Layout ID, Layout Name, Store Name, and Action option in tabular format.

Manage Home Page Layout				Add Layout
<div> <div>Actions</div> <div>19 records found</div> </div>		<div> <div>20</div> <div>per page</div> <div><</div> <div>1</div> <div>of 1</div> <div>></div> </div>		
	Layout ID	Layout Name	Store Name	Action

Mobile App (Frontend View)

Magento 2 MageMob App Builder is a mobile app extension that helps you to build a custom mobile app for your Magento 2 Store easily and quickly. Apps built with MageMob App Builder are optimized for both **Android** and **iOS** platforms and mobile responsive also. It now offers **Android 15 Support** as well.

After configuring the MageMob App Builder from Magento 2 Backend, the user can access the app's features.

Login and Registration

- MageMob App Builder allows users to log in with a registered email id and passwords.
- Another way to log in with social media accounts like Facebook *or* Google. On that page, the user needs to enter the email id and password of the existing social media account.
- **Skip:** It also allows users to visit the app without registering themselves by clicking on **Skip**.

Welcome,

 Sign In with Google

Don't have an account? [Sign Up](#) [Skip >](#)

[<](#) **Reset Password**

To reset your password, enter your registered email address.

If your email address is registered with our application, you will receive an email with a link to reset your password.

Email*

Submit

- If users forgot or misplaced their password, they can click on **RESET PASSWORD HERE** which is provided on the page and thus can be reset by providing a registered email address.

Note: To check out the products, the users must have Sign Up.

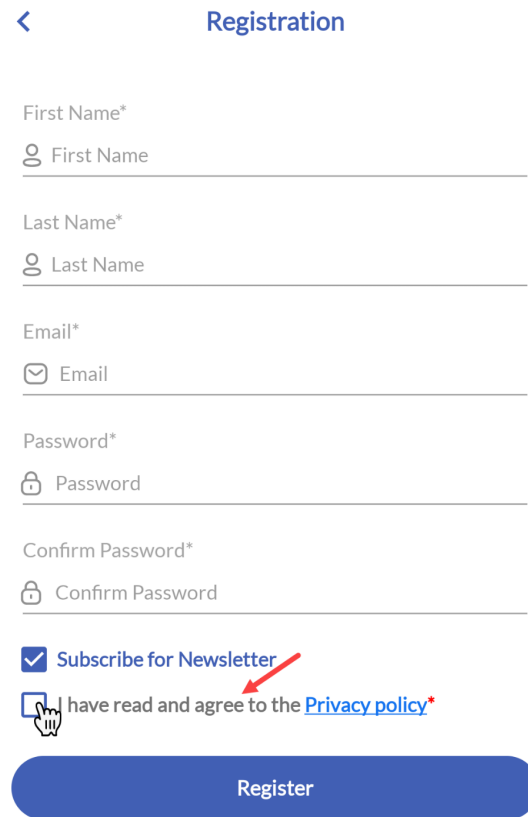

Registration

If user is not registered yet, user can register themselves with the store directly from the application by clicking on REGISTER HERE link from the Login page.

User must enter basic details like First Name, Last Name, Email Address and Password for registration.

If you have enabled the GDPR from the Magento admin side, the users will see the Privacy & Policy checkbox for agreement the terms.

User can also Subscribe for Newsletter, by clicking and will be notified for upcoming offers via mail or receive any important news on registered email address.

The screenshot shows a mobile app registration screen. At the top left is a back arrow, and at the top right is the title 'Registration'. The form contains the following fields: 'First Name*' with a person icon, 'Last Name*' with a person icon, 'Email*' with an envelope icon, 'Password*' with a lock icon, and 'Confirm Password*' with a lock icon. Below these is a checked checkbox for 'Subscribe for Newsletter' and an unchecked checkbox for 'I have read and agree to the Privacy policy*', with a red arrow pointing to the latter. At the bottom is a blue 'Register' button. A black mobile navigation bar is visible at the very bottom of the screen.

Dashboard Screen (Home Page)

After configuring the layouts in **Manage Home Page Layout** from Magento backend, the dashboard screen will be displayed as per the configured sequence.

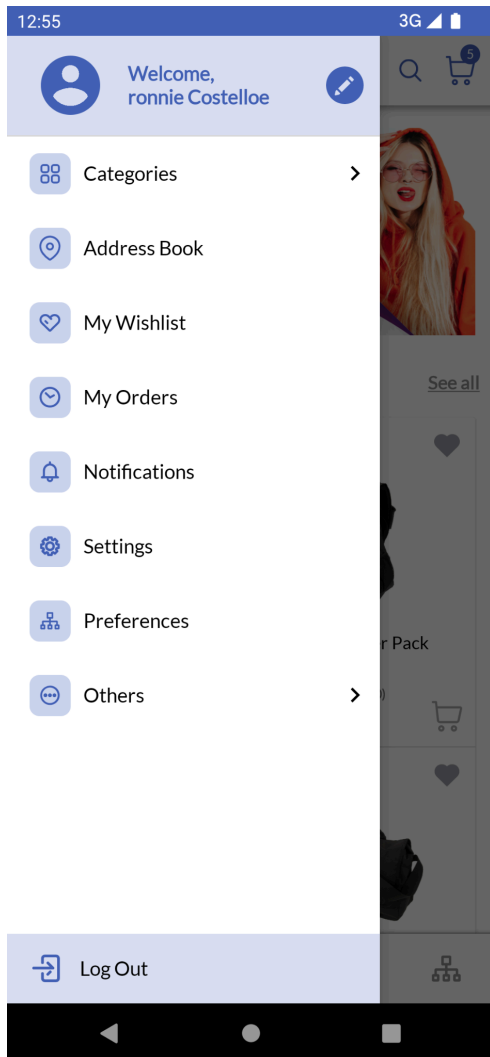

On the header, there are mainly navigation points in the menu:

- > Category Menu
- > Search Product
- > HOME icon
- > Notification icon
- > Cart

The users will see the modules in the footer (bottom) as selected in the “Bottom Navigation Modules” from the Magento backend.

> Category Menu ☰

- By clicking on ☰ icon, the drawer will slide from the left.

The menu drawer consists of the Product Categories and their subcategories that are configured from the backend.

The header of the drawer menu contains the details of User profile. For the Logged in users, it provides modules like Wish List , Orders & Addresses.

Note: If user is not logged in, it will display as **Welcome, Guest!**

Preferences

User can select the Website, Store & Currency which are configured from the backend.

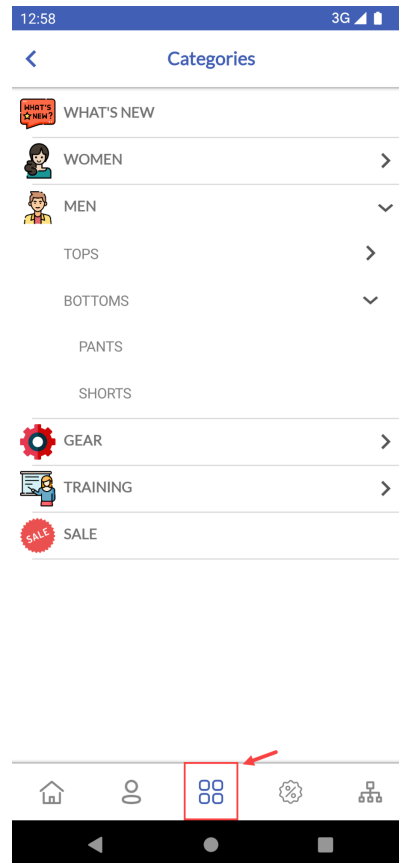

Menu drawer will also consist of CMS Pages which are selected from the backend configuration:

- > About Us
- > Contact Us
- > Our Policy
- > FAQs

From where user will be able to navigate to various CMS pages.

> Category

- If you have selected the **Category** to display in the bottom navigation from the MageMob App Builder Configuration (Magento admin side), the users will see the **Categories** tab in the bottom navigation.
- By pressing the 'Categories' tab from the bottom navigation, the users will see the categories in the nested format as configured from the Magento admin side.

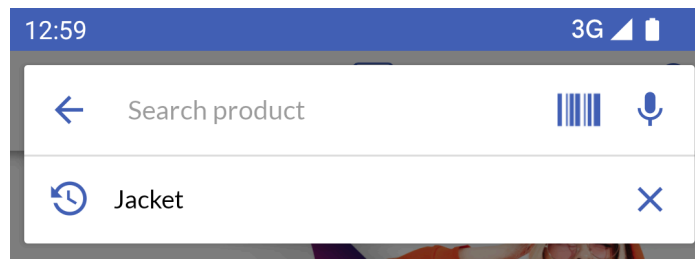

- By pressing on the specific category, the users will be redirected to the product listing page of that category.

> Home Page: Search Product

User can search the Product by pressing search icon .

- Users will get the **last searched 5-products** in the dropdown list under the Search product text box.
- Users can search for any product by inserting the name, caption, or SKU of the product.
- Users can search any product using **Barcode Scanner** which is enabled from the **Stores -> Configuration -> Search with Barcode Scanner** option under the **General Configuration**.
- Also, 'voice search' is available for searching products for both Android and iOS.

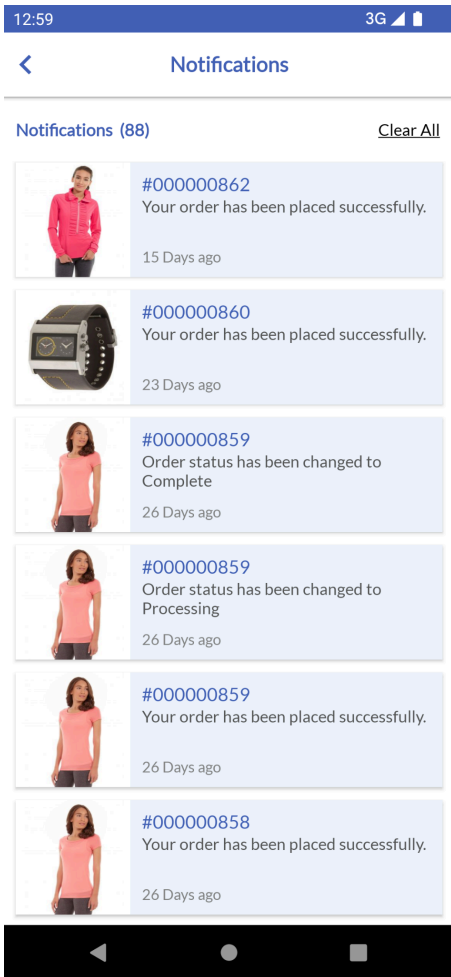

> **Magento Home icon**

- By tapping on this  icon, the user will redirect to the home page (Dashboard) from any page in the app with the latest updates.

> Notification

- By clicking on notification  icon, user can check the notification related to orders and its status.

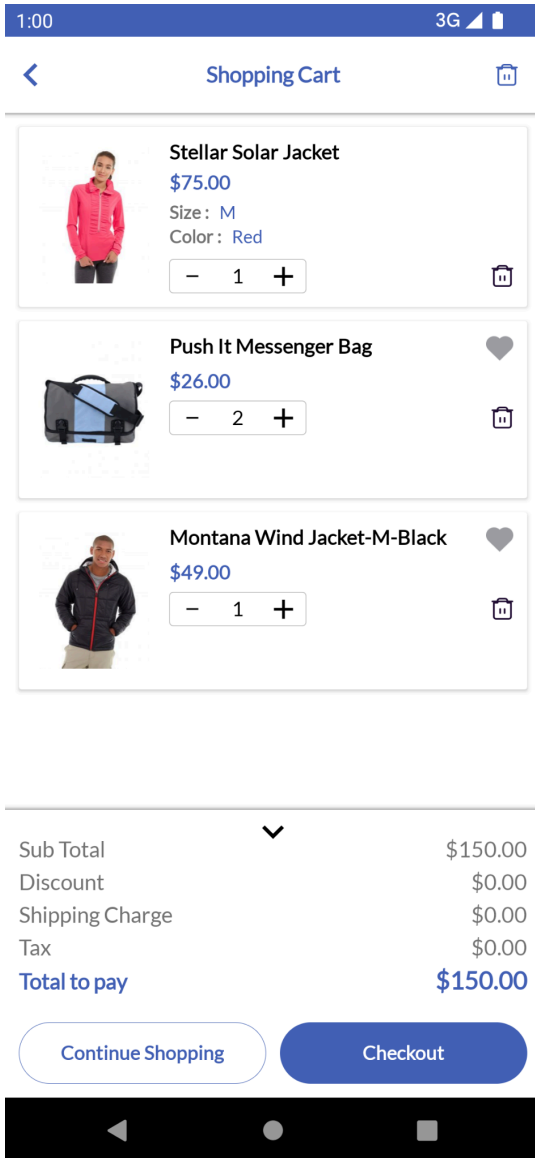

Notifications can be removed by pressing Clear All.

In this page, some notification tabs are highlighted with blue color, it shows that notifications are unread, others are already read by user.

By swiping left it will show the 'delete' icon to remove that notification.

> Shopping Cart

- By clicking on the Cart  icon, users can manage the items which they have added to the cart.

User can manage the quantity of product, proceed to checkout by tapping on Checkout button and remove product from the cart by tapping on Remove button.

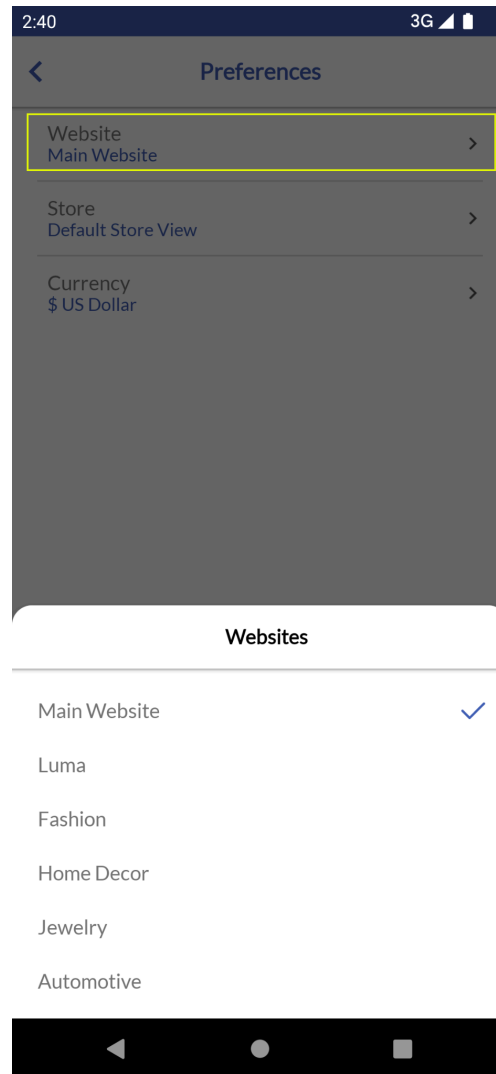

Note: By adding product into Wishlist it will remove from cart.

User can continue shopping by tapping on Continue Shopping button. By tapping on it, user will be redirected to the Dashboard and continue searching other products.

Preferences

Select Website:

- From the “Preferences”, the users can see the **Website** option with the selected Website.
- Users can change the Website by tapping on the **Website** option and select another preferable website.

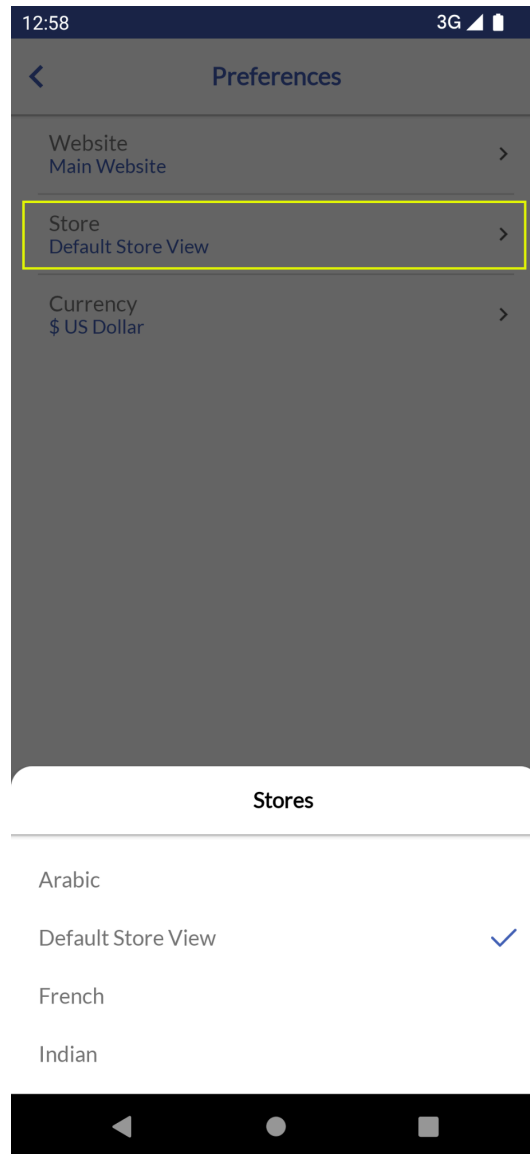

- User will get the list of the **Websites** as per the backend configuration and tap on the website which he/she wants.

Note:

If you have purchased ‘Multiple’ domains, only then the user will **get** the **Website** option enabled under the Preferences. But if you have the ‘Single’ domain, the Website option will not be available.

Select Store:

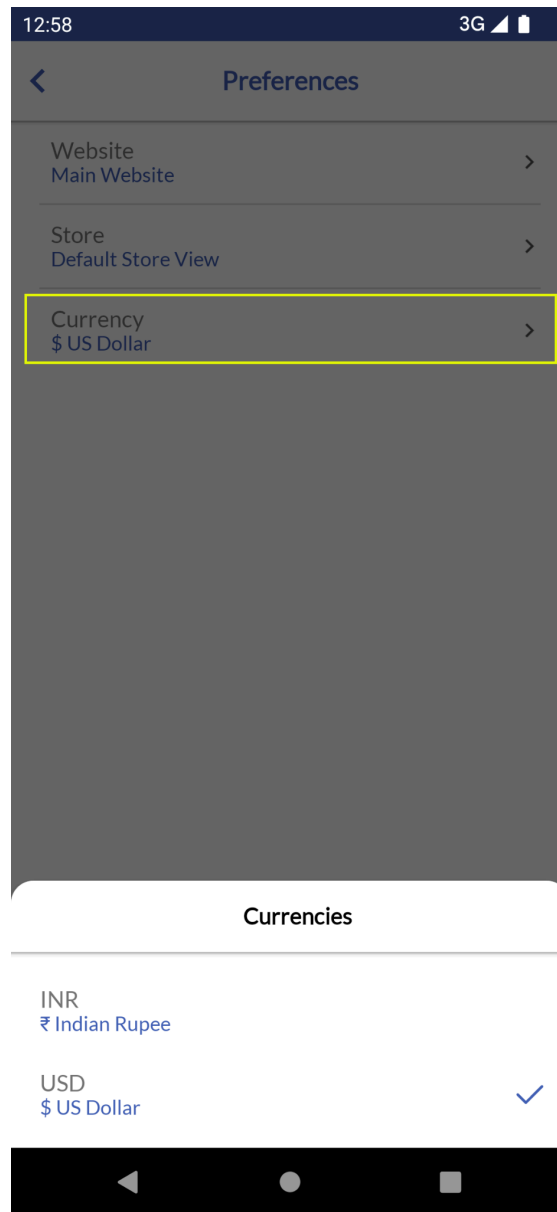

- Under the Preferences, User can see the Store option with the name of the selected Store.
- Users can change the Store by tapping on the **Store** option and selecting another Store. (Left image)

- User will get the list of the **Stores** as per the backend configuration and by tapping any Store, the Store will be selected.

Select Currency:

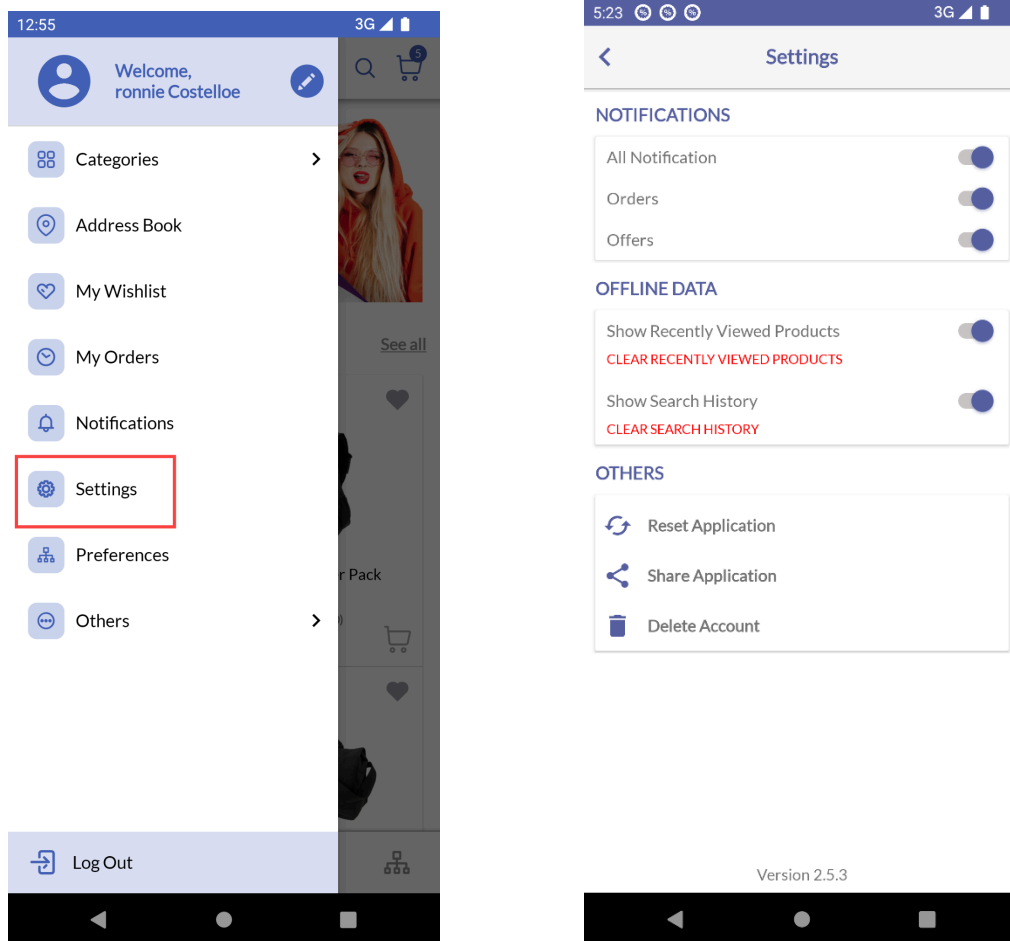

- Under the Preferences, the User can see the Currency option with the already selected Currency.
- Users can change the currency by tapping on the **Currency** option and selecting another Currency. (Left image)

- Users will get the list of the **Currency** as per the backend configuration and by tapping any currency, the Currency will be selected.

App Settings

- Users can manage various settings for the Magneto 2 store mobile application by clicking on **Settings**.

- From the Settings page, the user can manage the following things: (Left screenshot)
 - Notifications:** They can Enable/Disable the notification preferences based on which notification they want to get.
Note: Enable/Disable the notification appearance only available in Android App. While iOS does not allow to enable/disable the specific notifications. In iOS, we can disable all /enable all notifications.
 - Select Store:** They can switch between multiple stores by tapping the 'Store View' dropdown icon.
 - Offline Data:** Users will have the option to manage the following Offline Data:
 - Show Recently Viewed Products:** Enable the 'Recently View Products' list and **Clear** it
 - Show Search History:** Enable 'Search History' and **Clear Search History**.

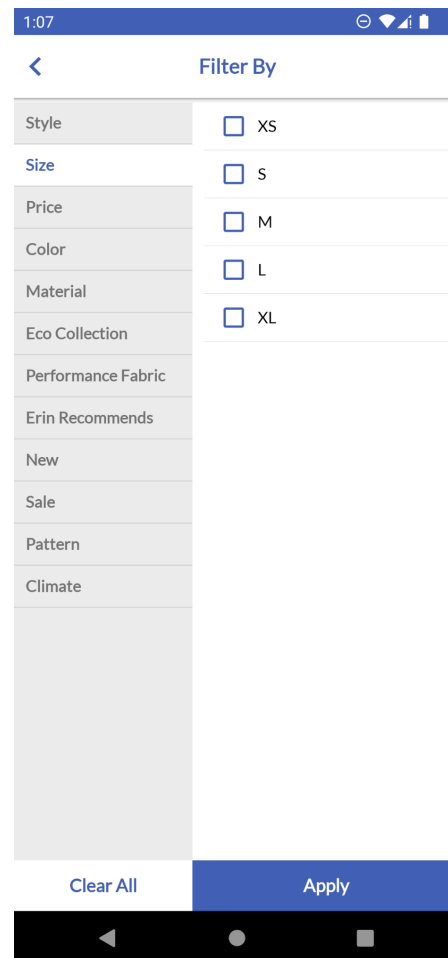

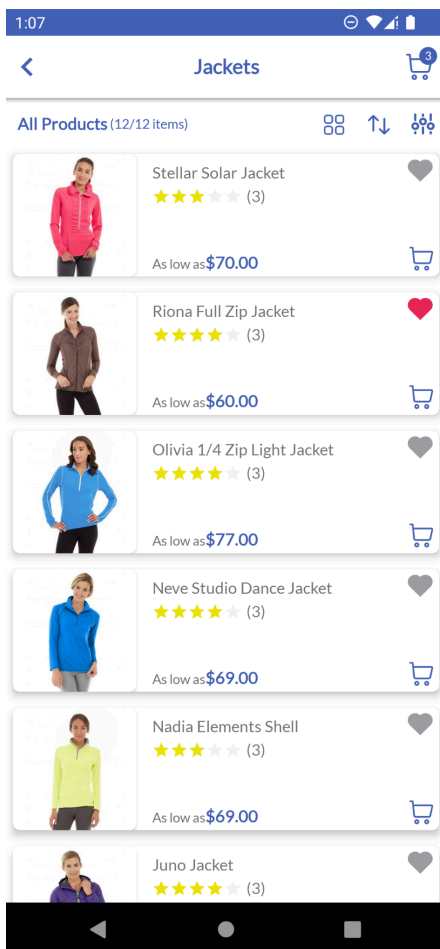

- **Reset Application:** It will clear the cache memory, remove the permission from the app and make it new installed.
- **Share this Application:** Share the Application link to another user.
- **Delete Account:** Users can delete the account and the data will also be deleted. User must be logged in to get the **Delete Account** option.

Product Page

- You can check the listing of the products, filter the products, and check the product details.

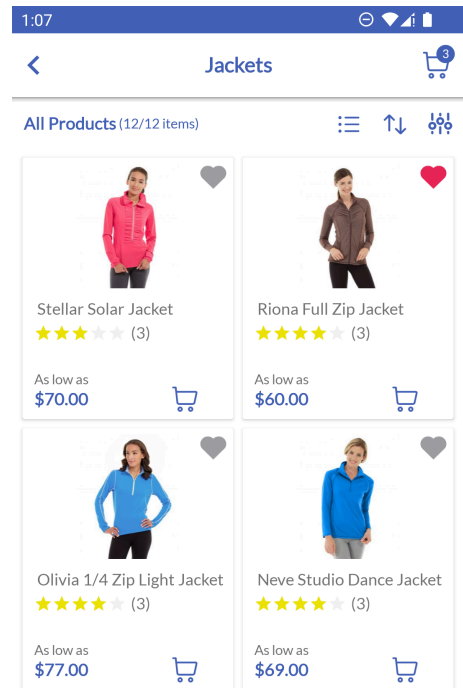

Product Listing Page

- The product listing page of any category displays the product details with basic details like Product Name, Price, Ratings, Wishlist, and Cart.

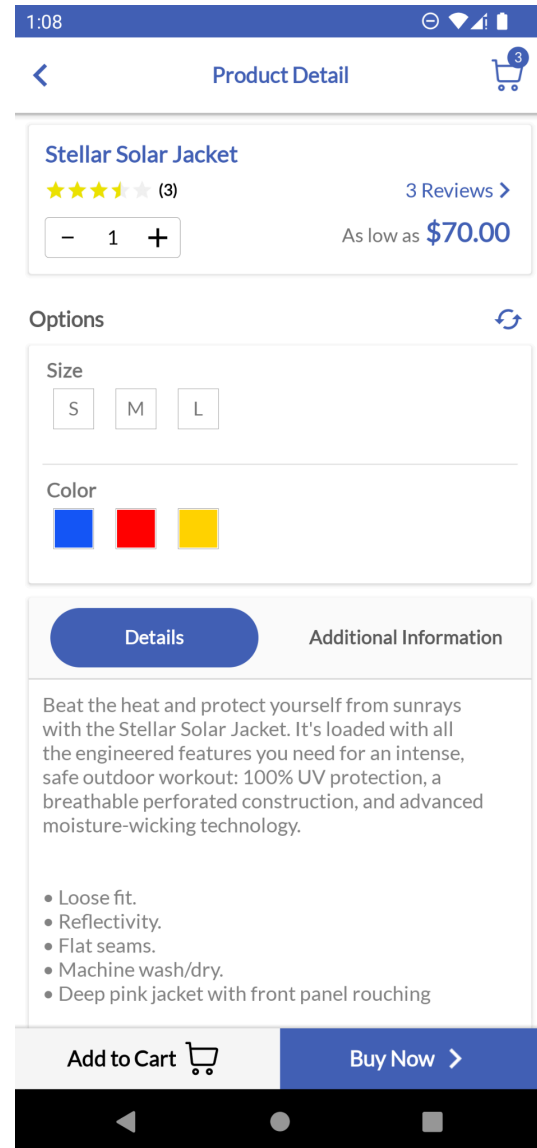

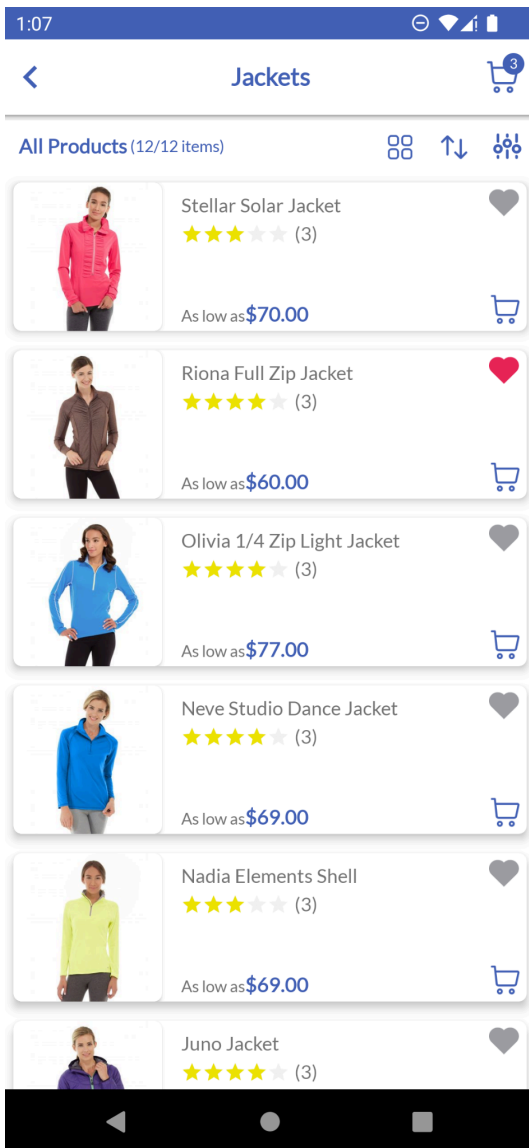

- It can also sort by price low to high, high to low and filtered with different options like category, color, size, etc. by tapping on 'Filter' icon . (right screen)

User can view the product in Grid view by tapping on 'Grid view' icon and get back to List view by clicking on 'List view' icon.

Product Detail Page

- The product detail page of any product displays the product details with basic details like Product Name, Price, Ratings, Size, Color, and details with options “Add to Cart” and “Buy Now”. (Left screenshot)

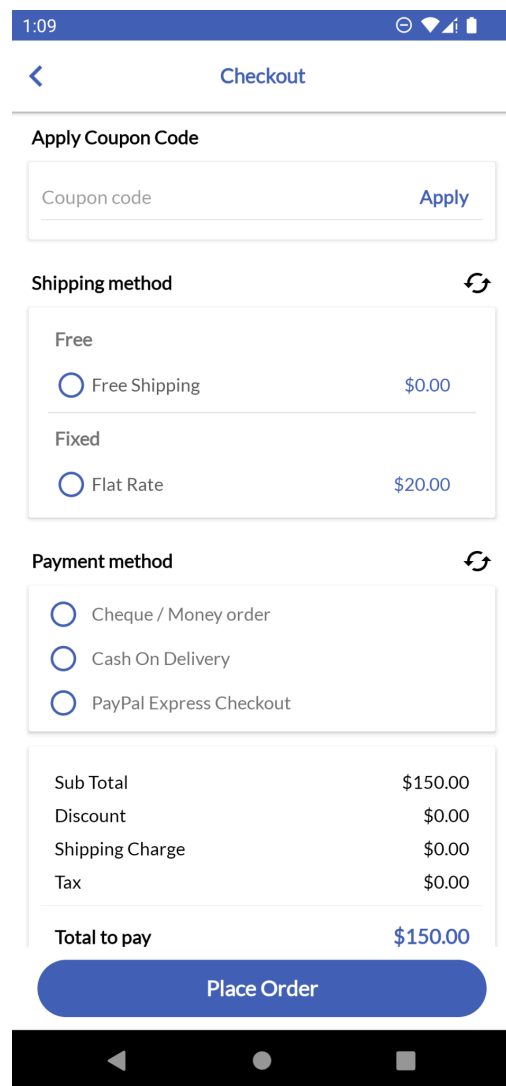

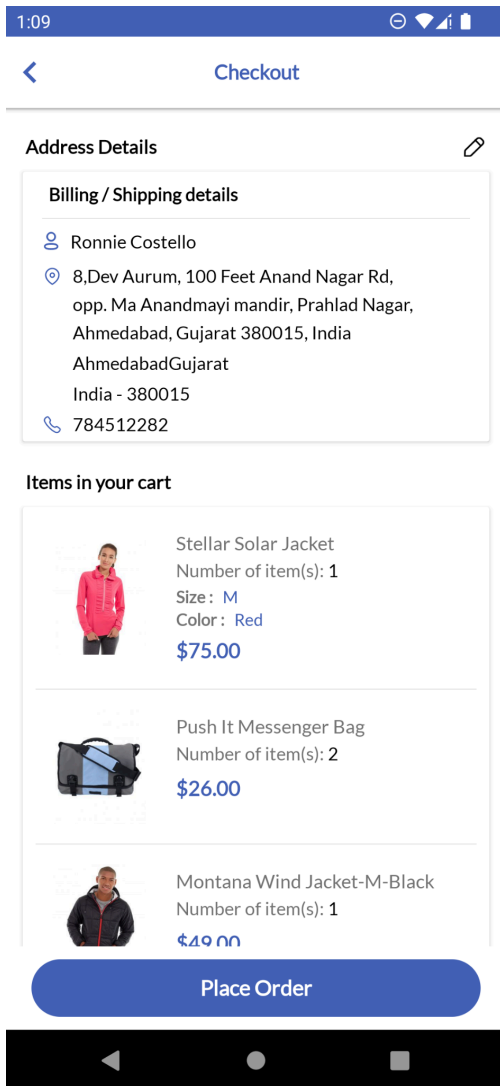

- As you ‘tap’ on the product from the listing page, it will redirect to the product details page in which the user can find the product’s price, quantity to add, reviews & ratings, size & color options, by scrolling down the detailed descriptions for the product, and buttons to add product in **Cart**  or **Buy Now** to proceed to checkout. (Right screenshot)
- Users can **Share**  products via different social media platforms and add products into **Wishlist** by tapping on  icon.

Note: You can enable/disable the Wishlist option from the Store Configuration.

Product Checkout Page

- Users can **Check out** shopping from the **cart** or directly tap the **Buy Now** button from the product details page. (Left screenshot)

Note: If the shipping address is not added yet or if you are a guest user, users will be redirected to **Add New Address** page. After saving the Address, users will redirect to the check-out page.

- After selecting the address, they can insert a Coupon Code if available, select relevant Shipping Method and Payment Method. (Right screenshot)
- By tapping the **Place Order** button, the Order will be placed, and the user will be redirected to the **Order Confirmation** page.

Countdown Timer Banner

- If you have configured the Countdown Timer Banner from the Manage Home Page Layout (Magento admin side), the users will see the discounts/offers in the countdown timer banner.

- For the countdown timer banner, you can configure the banner background, timer text color, and overall appearances by managing the countdown timer banner from the Magento admin side.

Offers tab

- If you have added and configured the offer banners from the Magento admin side (Manage Offers) and selected the Offers from the “Bottom Navigation Modules” (Store-level), the users can access the **Offers** tab from the mobile app. (Left image)

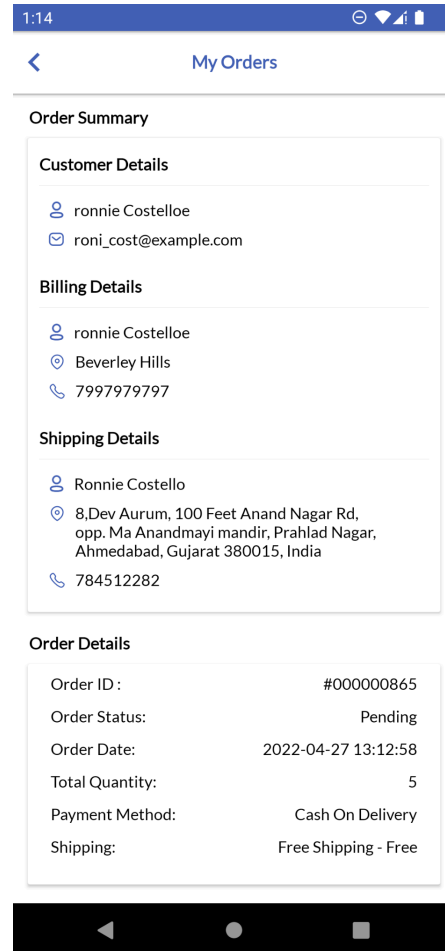

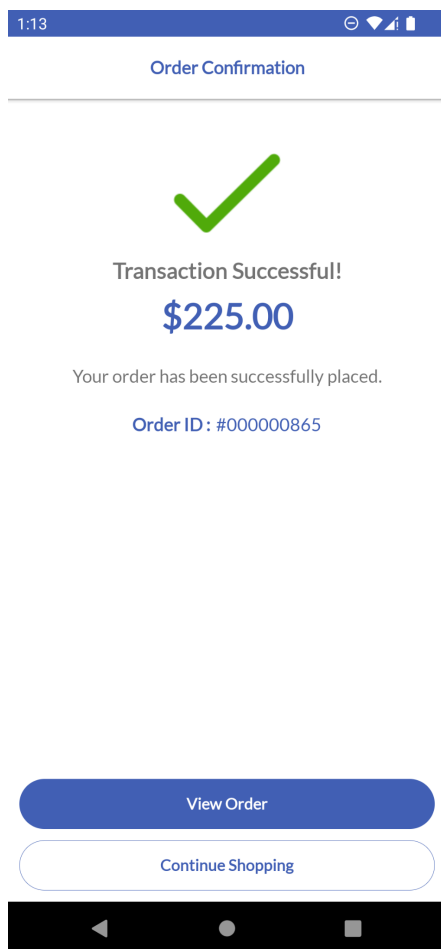

- When the users press on the “Offers” tab, they will be redirected to the offers page and see the different offers. (Right image) By pressing on any offer banner, the users will be redirected to the specific page as per the configured redirection option from the Magento backend (Manage Offers).

Orders

Order Confirmation Page

- It gives confirmation for placing an order successfully and provides an Order ID number to track the order at the time of delivery. It also provides buttons to **continue** your **shopping** and **view orders** which display ordered details. (Left screenshot)

- By tapping on the **View Order** button, they will be redirected to the Order Details page. (Right screenshot)
- Users can check the Order Summary on the Order Details page. Users can **Reorder** and **Cancel** the order as per requirement.

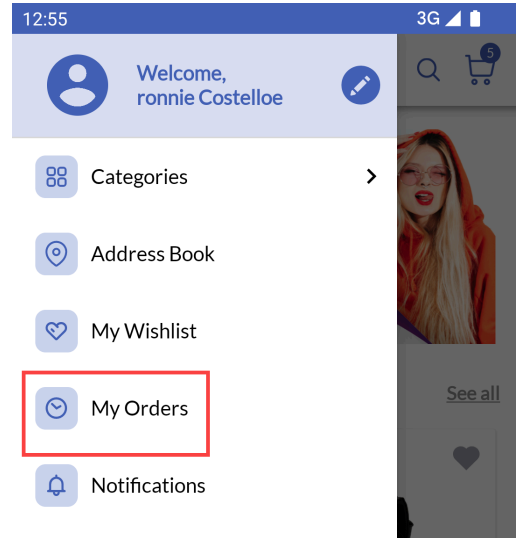

Note:

User can cancel the Order if the order status is still in **place**, once the order comes in Processing, it cannot be canceled.

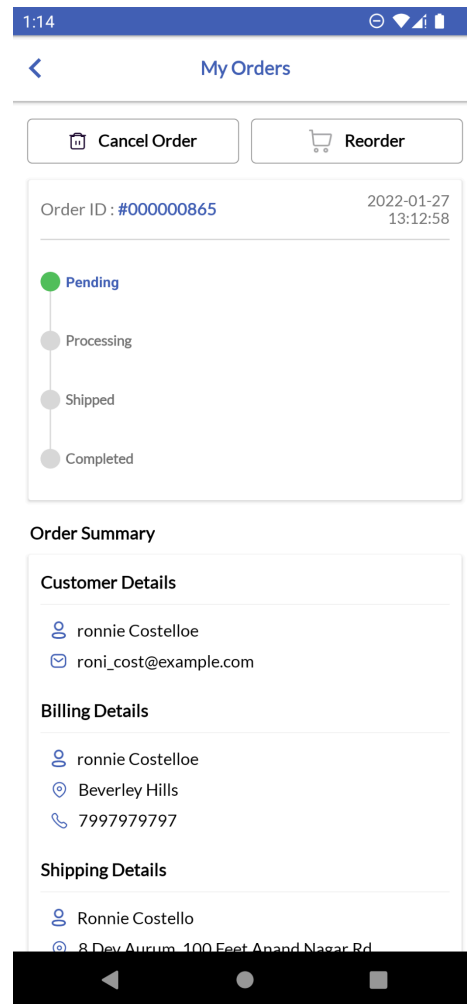

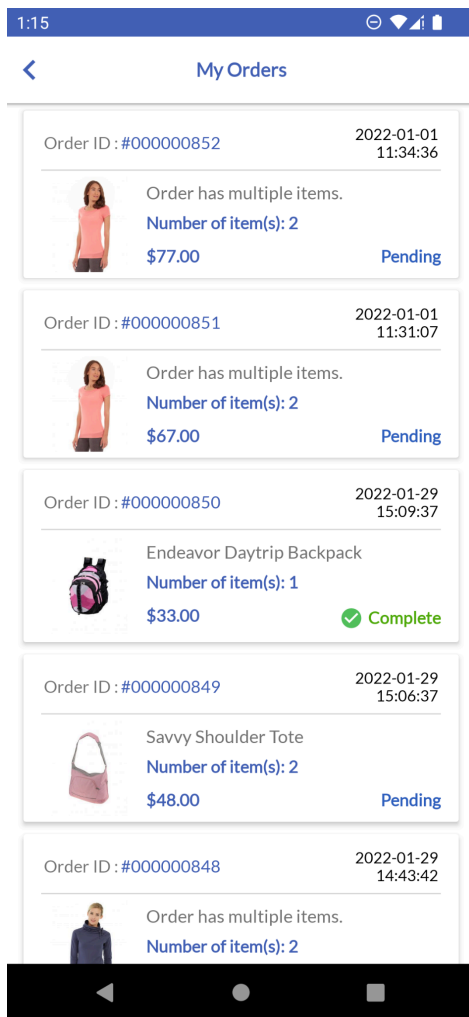

- MageMob App Builder also supports custom status of Magento which will be displayed on the Order list and detail page. You can create/update the custom status from **Stores** > **Settings** > **Order Status** in the backend.

Track Order Listing Page

Logged in user can track the order by tapping on **Orders** in the Category slider.

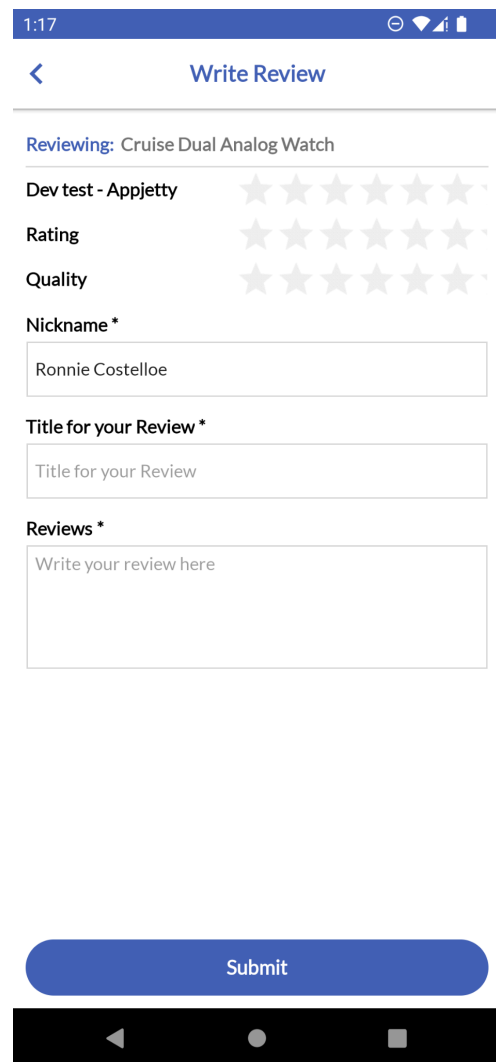

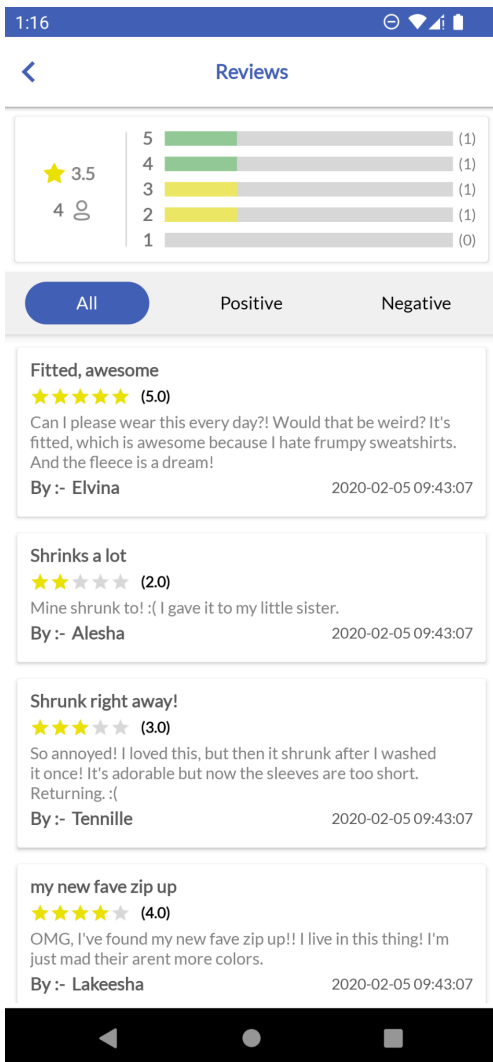

- By tapping on **Orders** 🛒, users get a list of all placed orders with order status and tracking information. (Left screenshot)
- By tapping on any order, it will show details about delivery and other information.

- The **Track Order** button will appear if it is configured from the Magento backend.
- By tapping on it, the user will get the information related to the order under the Order Tracking page.

Product Review Page

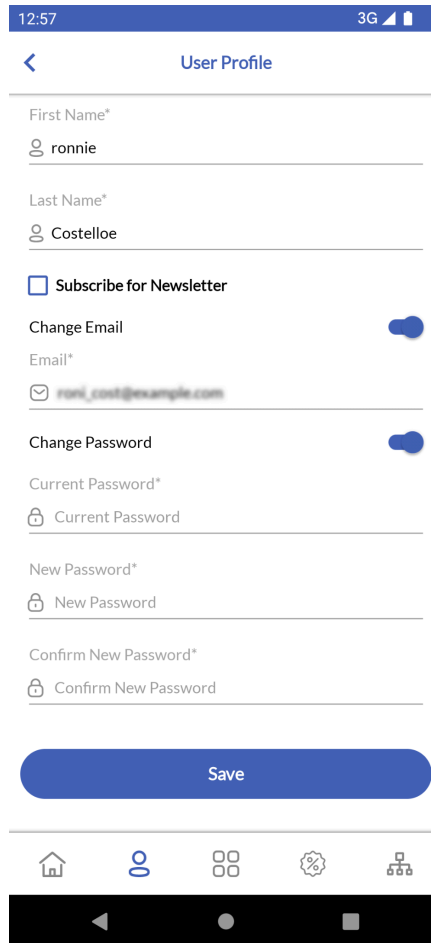

- Here, you can see the list of reviews given by different customers for the product. It can also be filtered by Positive and Negative options. (Left screenshot)

- Write Review** page will appear after completion of order. (Right screenshot)
- User can share review about purchased product by adding review for product and giving ratings for price, value, and quality of received products.

User Profile

- If user is logged in, the options related to User Profile will be displayed:
 > Wish List , > Orders  > Addresses  .

12:57 3G

< User Profile

Save

    

- By tapping on 'edit'  icon, User Profile page will be redirected. (Right screenshot)
- User can check own profile and update the details by tapping 'edit'  button.
- By tapping on key  button, user can update old password.
- User can sign out by tapping Off icon .

Wishlist Screen

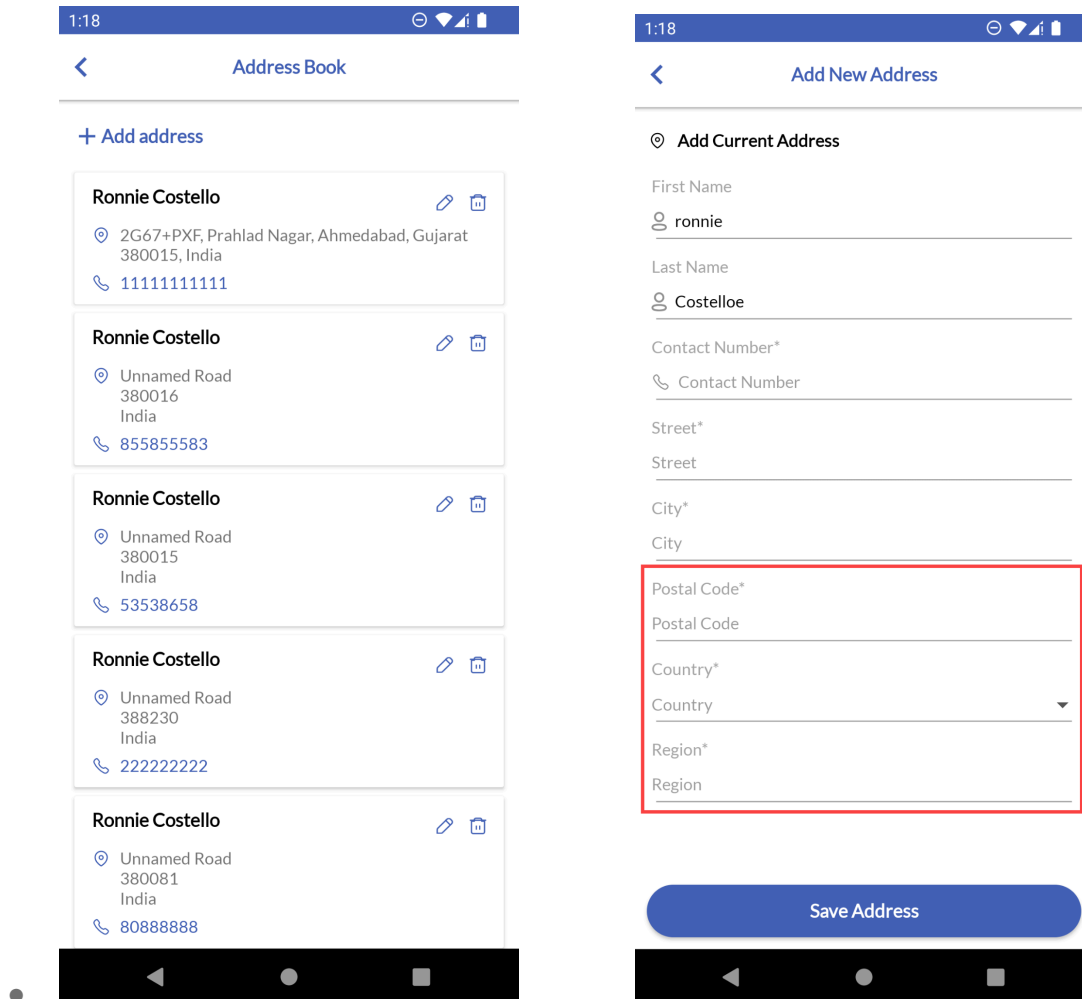

- User can manage Wishlist by adding & removing the products.
- The product is added in the Wishlist from the Product listing page *or* from the Product details page by clicking on Wishlist icon .
- You can add to cart by clicking on Cart icon .
- To clear whole Wishlist, tap on **Clear All** button. All the added products will be removed.

Note: You can make changes to the **Wishlist** option from the backend configuration. For that navigate to Stores  Configuration  Customers  Wish List  Under the 'General Option', you can Enable/Disable the Wishlist option for Mobile app.

Address Page

- User can add address to ship order by clicking on add button on top right corner. Here you need to define address details like street, city, postal code etc.
- User can also manage address by editing or removing saved addresses.

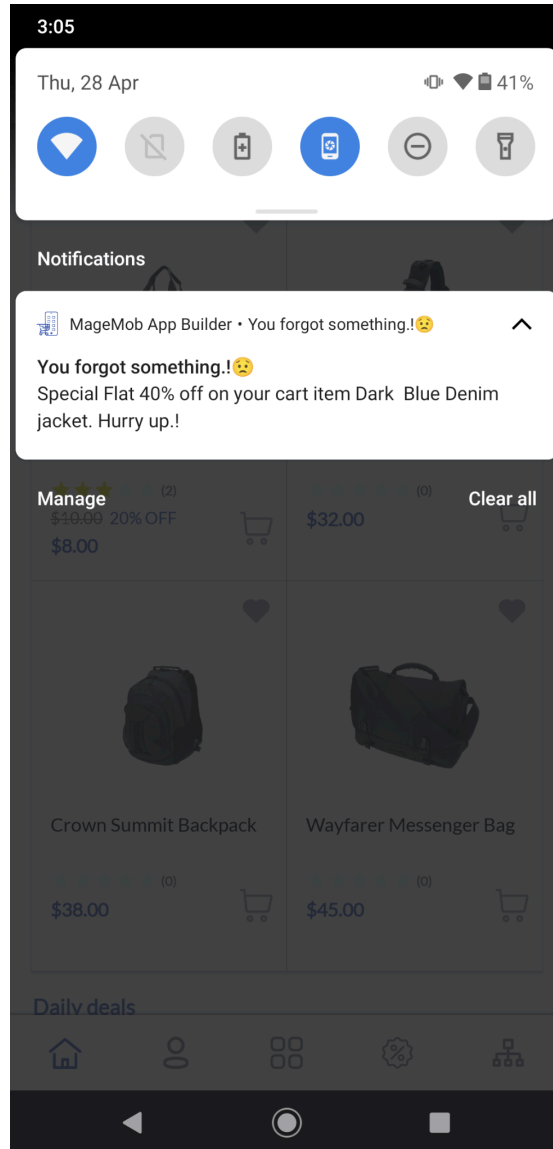

- User can also find address which they want to save on google map by placing pointer to that address. It will fetch directly to defined address fields.

Note:

- You can manage the Zip/Postal Code and Region (State) as mandatory or non-mandatory fields based on the configuration from the backend.

Abandoned Cart

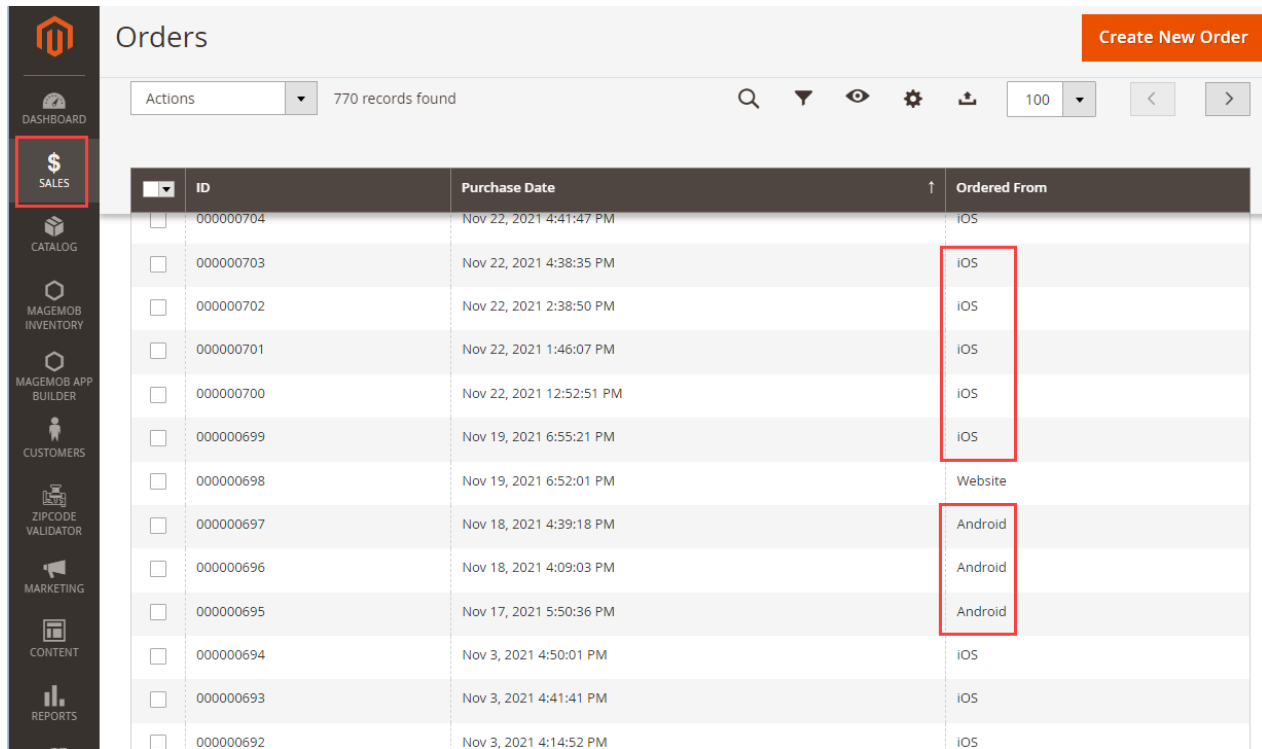

- The users would get the notification of the Abandoned Cart if they missed the checkout of their shopping. The notification will be displayed as configured from the Magento admin side (Manage Abandoned Cart Notification).

- If multiple products are in the cart, the users will get abandoned cart notifications for the multiple products if you have added the dynamic variable.

Order Bifurcation (Magento Admin)

- You can check the placed order by navigating to the **Sales** → **Orders** from the Magento Backend.
- Once the customers place the orders from the MageMob App Builder, the admin can check on which mobile OS they have placed the orders from the Magento backend (Orders).

	ID	Purchase Date	Ordered From
<input type="checkbox"/>	000000704	Nov 22, 2021 4:41:47 PM	iOS
<input type="checkbox"/>	000000703	Nov 22, 2021 4:38:35 PM	iOS
<input type="checkbox"/>	000000702	Nov 22, 2021 2:38:50 PM	iOS
<input type="checkbox"/>	000000701	Nov 22, 2021 1:46:07 PM	iOS
<input type="checkbox"/>	000000700	Nov 22, 2021 12:52:51 PM	iOS
<input type="checkbox"/>	000000699	Nov 19, 2021 6:55:21 PM	iOS
<input type="checkbox"/>	000000698	Nov 19, 2021 6:52:01 PM	Website
<input type="checkbox"/>	000000697	Nov 18, 2021 4:39:18 PM	Android
<input type="checkbox"/>	000000696	Nov 18, 2021 4:09:03 PM	Android
<input type="checkbox"/>	000000695	Nov 17, 2021 5:50:36 PM	Android
<input type="checkbox"/>	000000694	Nov 3, 2021 4:50:01 PM	iOS
<input type="checkbox"/>	000000693	Nov 3, 2021 4:41:41 PM	iOS
<input type="checkbox"/>	000000692	Nov 3, 2021 4:14:52 PM	iOS

- From the Orders listing page, you will see the **Ordered From** column. If the customer has placed the order from the “Android” device, you will see the order highlighted as **Android** in the column. But, if the customer has placed the order from the “iOS” device then the order gets highlighted as **iOS** in the column.

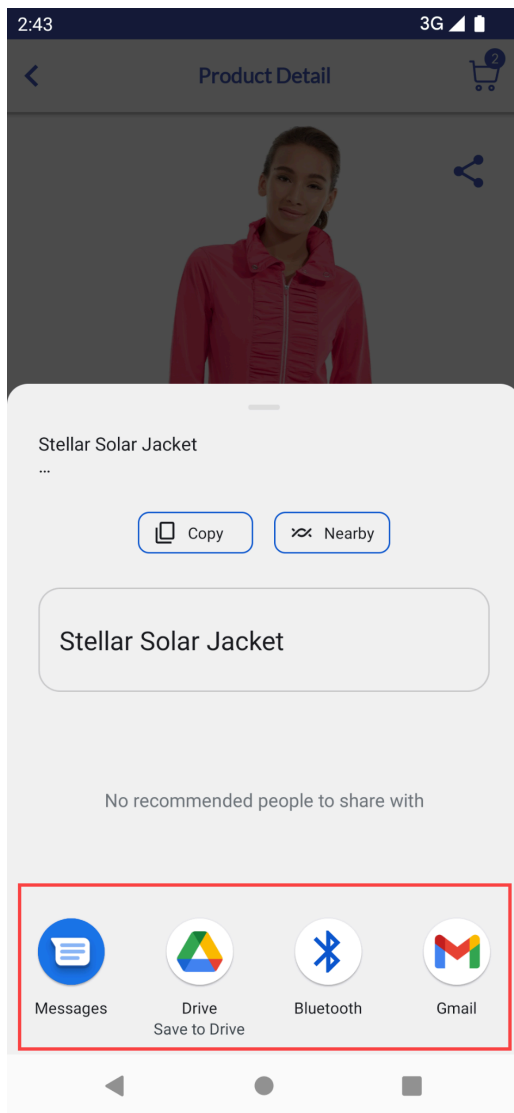

Note: The other orders that are not placed from any mobile device will be highlighted as **Website** in the column.

Deep Linking (Product Sharing)

- Sometimes Web links don't work with native mobile apps. So, the 'Deep Linking' comes into the picture.

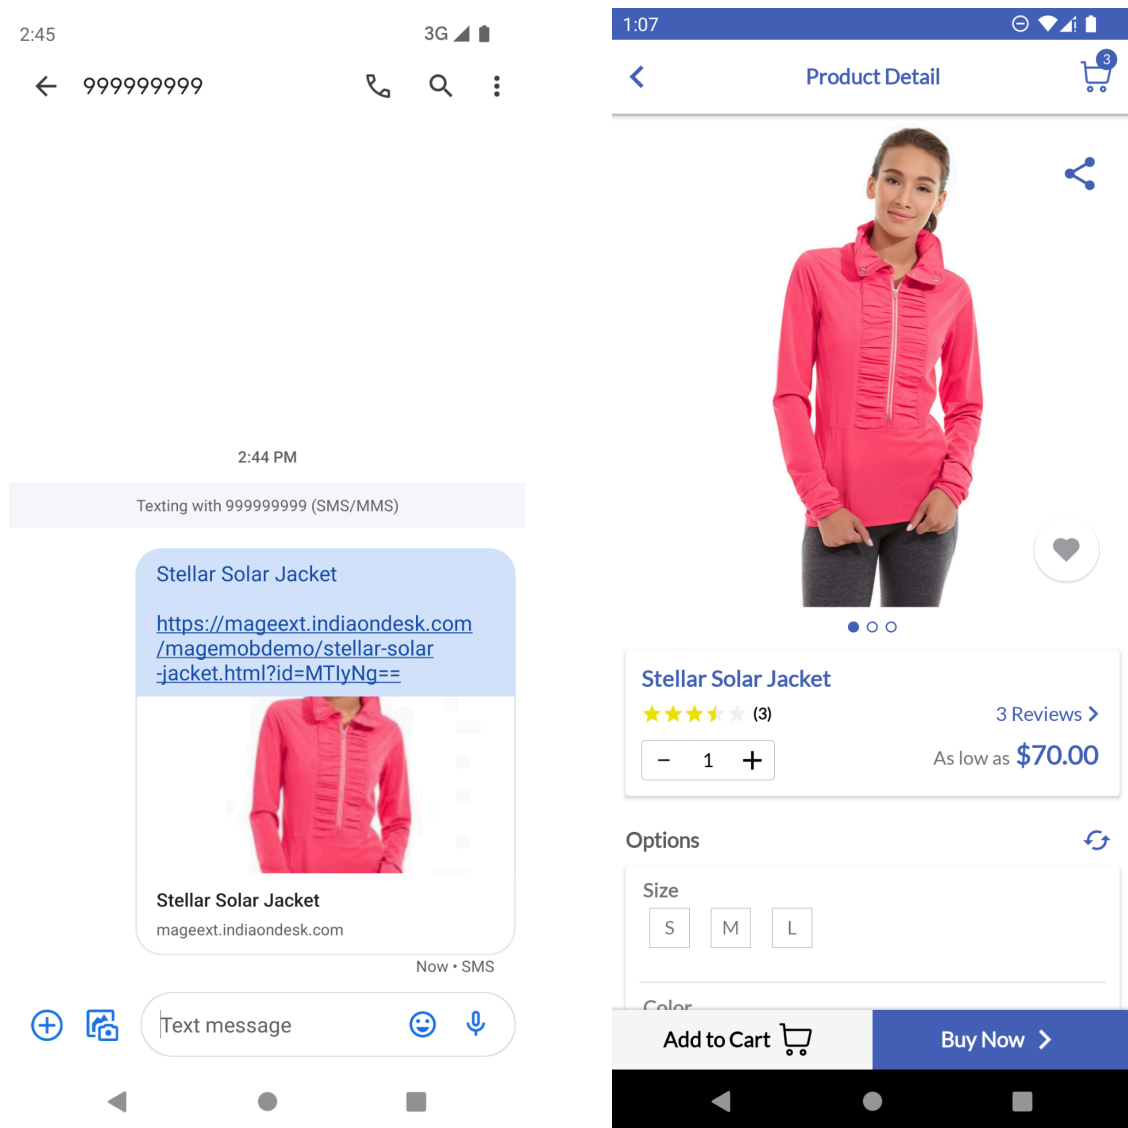

- Deep Links allows the mobile app to push to a specific page within an app versus simply opening it.

If two users have MageMob App Builder application installed on their phone and they want to share products to each other, one user shares the product URL from the sharing option from the product detail page to the second user.

A link will be shared via any messenger.

- 2nd User will get that shared product link in messenger. (Left screenshot)

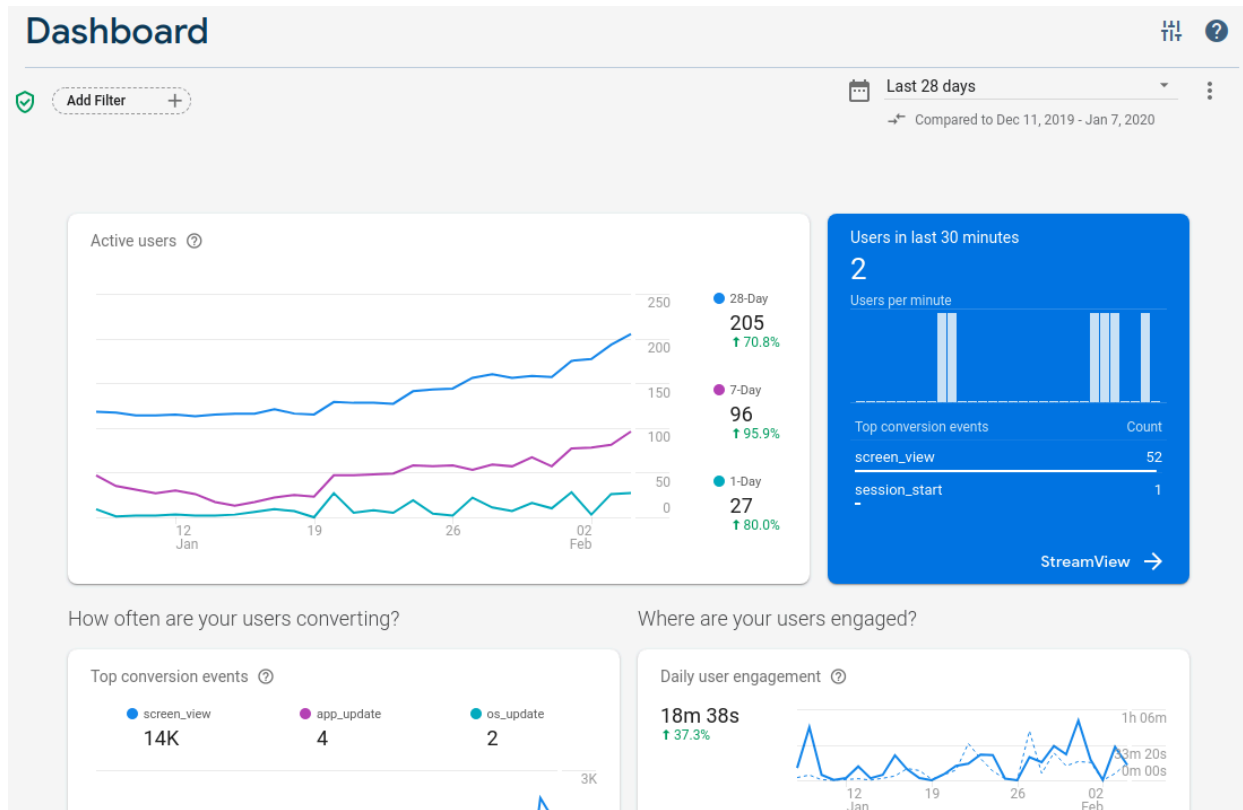

- Now, if 2nd user clicks on the URL which is sent by the 1st user and have application installed on the phone, the app user will be redirected directly to the detail page of that product in the application. (Right screenshot)

Note: If app is not installed, either it will redirect to the play store or open in the web browser.

Firebase Analytics

- Admin can track daily user engagement, device details of users, country location and crash analytics as well.
- If any user is facing any crash while using an application, then we can get idea from the analytics report and update the application if required.

Points to Note

- Products in all the modules of MageMob App Builder will only be visible if they are assigned to the website selected while purchasing the Extension.
- You can try our MageMob App Builder demo app from Play Store or App Store.
- **App Store link:** <https://itunes.apple.com/us/app/magemob-cart-customer-mobile/id1039362898?mt=8>
- **Play Store link:** <https://play.google.com/store/apps/details?id=com.biztech.magemobcart>

Basic Support - Application Maintenance

This plan is designed to ensure the ongoing stability and security of your application with essential support services. It includes:

- **Minor Bug Fixes:** Addressing small issues or bugs reported by users or clients.
- **Security Patches:** Applying critical updates such as Flutter version upgrades and SDK patches to maintain app security and performance.
- **Crash Monitoring Setup:** Implementation and maintenance of tools like Firebase Crashlytics to track and report app crashes.
- **Technical Support (Limited):** Access to a limited number of technical support hours each month for troubleshooting or guidance.
- **Exclusions:** Please note that this plan does not include automatic upgrades or integration of new features from the base app.
- **Monthly Allotment:** 2.5 Hours
